HEDERA MAINNET · LIVE

Deleted.
Documented.
Permanent.

Signal Archive captures public statements, hashes them, and anchors proof to Hedera before the delete button rewrites history.

THE PROBLEM

The delete button has become an accountability escape hatch.

When a powerful account deletes a post, the public loses evidence at the exact moment it matters most.

1 Screenshots are weak evidence

Easy to fake, crop, edit, or dismiss in any legal setting.

2 Platform archives are not neutral

Private systems can change, disappear, or deny access.

3 Investigators lose the timeline

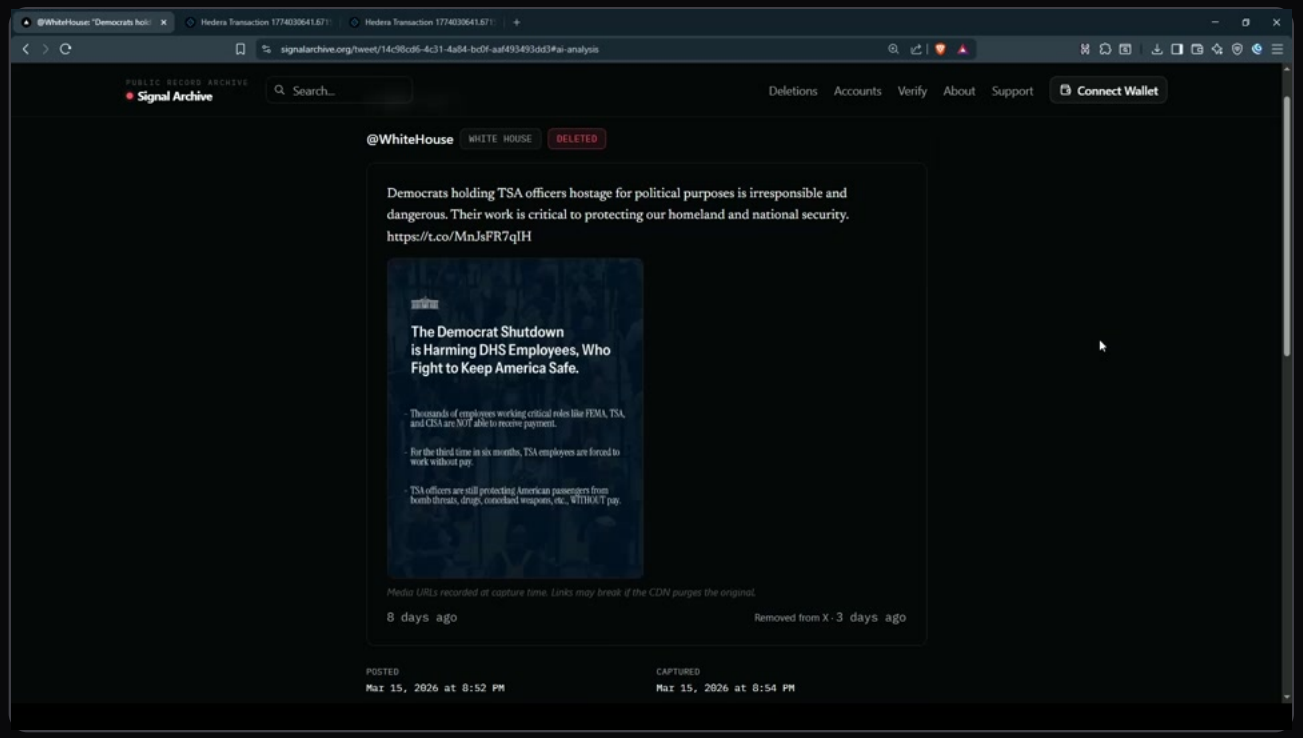
Journalists, lawyers, and watchdogs cannot prove what existed and when.

Deleted statements can move markets, muddy legal timelines, or erase contradictions from the public record.

THE SOLUTION

Turn a disappearing post into durable, verifiable evidence.

Capture, hash, attest, verify. No single party can rewrite the record.



1 **Capture**
Archive before deletion

2 **Hash**
SHA-256 canonical proof

3 **Attest**
Submit to Hedera HCS

4 **Detect**
Second attestation on delete

HOW IT WORKS

A lightweight pipeline where every handoff increases trust.

1 Monitor

Track priority accounts and capture every new post

2 Normalize

Create canonical JSON for reproducible hashing

3 Attest

Submit SHA-256 hash to HCS in 3-5 seconds

4 Detect

When a post vanishes, record deletion on-chain

5 Verify

Anyone can confirm proof on HashScan

tweet appears → canonical JSON → SHA-256 → HCS topic 0.0.10301350 → mirror node → delete detected → second attestation

WHY HEDERA

HCS is the right primitive for this problem.

Not a smart-contract problem. A timestamping, ordering, and public-verifiability problem.

3–5 sec finality

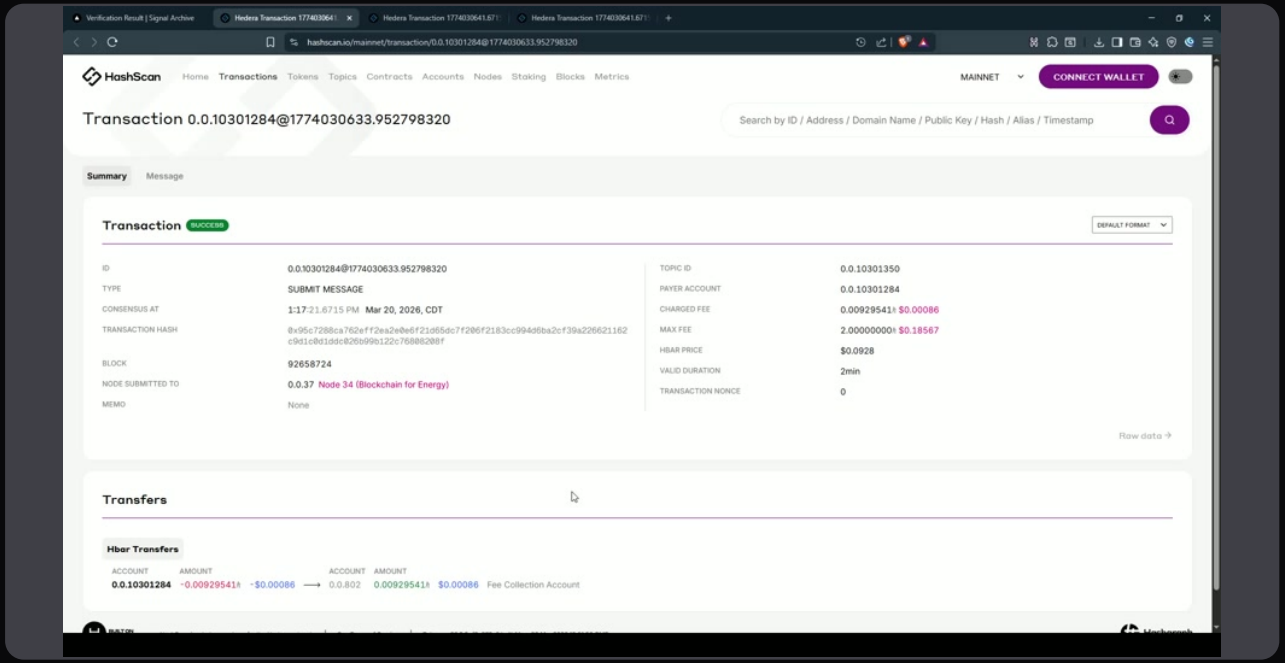
Proof anchored before a post disappears.

$0.0008 per HCS message

Viable to attest every statement.

Public record by design

Anyone verifies on HashScan.



Real attestation on HashScan — topic 0.0.10301350, operator 0.0.10301284

HEDERA INTEGRATION DEPTH

Five standards. One archive.

Not a single-feature integration. Signal Archive uses Hedera end-to-end.

HCS Consensus Service

4,093+ messages

Core attestation layer. Every hash and deletion event submitted to public topic 0.0.10301350.

HIP-551 Atomic Batch Tx

Token 0.0.10314265

Supporter NFT (SIGBADGE) minted via atomic batch: associate + mint + transfer in one tx.

HCS-2 Topic Registry

Topic 0.0.10388911

Archive structure published as machine-readable registry. Discoverable without our website.

HCS-11 HOL Registry

Agent: signal-archive

Registered as an AI agent on Hashgraph Online. Autonomous scoring recognized on-chain.

HOL UAID: uaid:aid:98gtn21G8xhjbQg4WYkVHHtyYsf6ko2V9YC2WLuh6rjTnD5J8qKxvux6CLGwMakhLH
Operator: 0.0.10301284 (hedera:mainnet)

AI SEVERITY SCORING

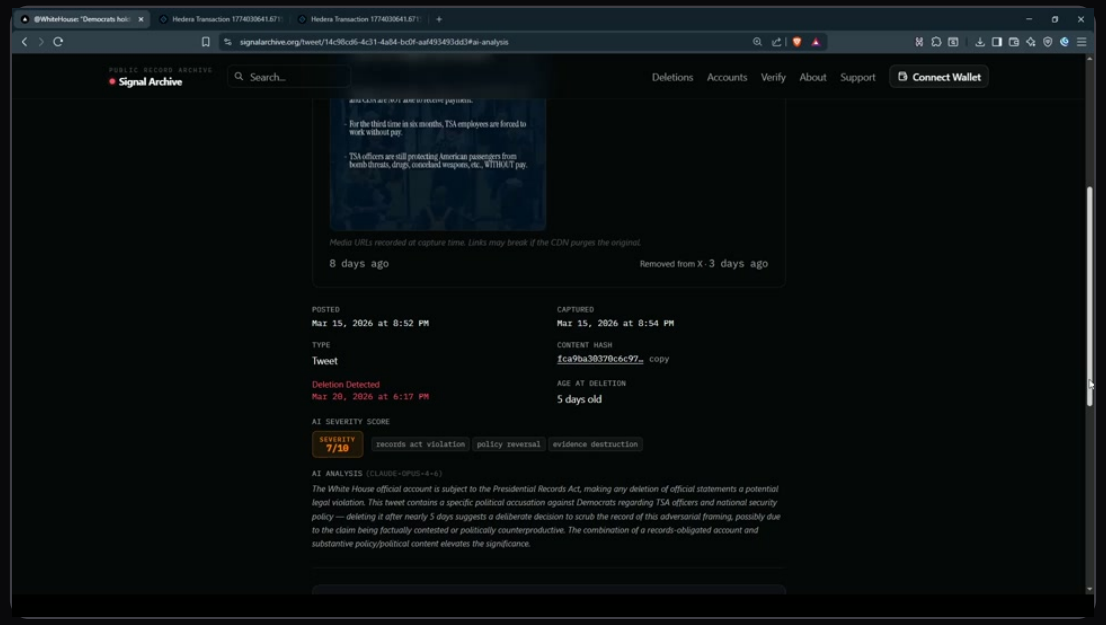
Not all deletions are equal.
AI separates signal from noise.

When a statement is deleted, Claude Opus scores it on a 1–10 public interest scale.

1 2 3 — **Mundane**
Typos, corrections, duplicates

4 5 6 — **Watch closely**
Policy walk-backs, financial statements

7 8 9 10 — **Public-interest alert**
Legal obligations, market-moving claims



TRACTION

Already live.
Already catching deletions.

This is not a mockup. The archive is public today.

4,093+
statements
archived on-chain

40
accounts
tracked

1
deletion
detected

REAL DELETION · March 20, 2026

@WhiteHouse deleted a statement on TSA officers.
Preserved, attested, AI severity: 7/10.

Publicly verifiable at signalarchive.org

Verify it yourself:

1 signalarchive.org
2 Pick any statement
3 Tap Verify
4 Confirm on HashScan

No trust required.

TECH STACK

Production-grade. Not a weekend hack.

Full-stack TypeScript monorepo. Every component chosen for reliability and auditability.

Frontend

Next.js 16 (App Router) + React 19 + Tailwind v4

Database

PostgreSQL (Neon) + Drizzle ORM, typed schema

Queue

BullMQ + Redis — ingestion, deletion detection, HCS

AI

Claude Opus — autonomous severity scoring (1–10)

Hedera SDK

@hashgraph/sdk — HCS, HIP-551, NFT minting

HOL Standards

@hashgraphonline/standards-sdk — HCS-11

Infrastructure

Railway (web) + Hetzner VPS (worker + CDP)

Monorepo

Turborepo — shared types, tsup CJS worker build

Open source · All GitHub commits within hackathon window (Feb 17 – Mar 23, 2026)

MARKET

Small enough to start. Big enough to matter.

Who needs this first

- **Investigative newsrooms** Faster source-of-truth checks
- **Watchdog groups** Proof for accountability reporting
- **Legal & policy teams** Timeline evidence when statements vanish
- **Academic researchers** Structured historical datasets

The moat is not just an archive

+ Real-time capture
+ Cryptographic proof
+ Public chain verification
+ AI severity ranking

Politwoops proved the need. Signal Archive proves the claim with independently verifiable evidence.

LIVE TODAY · HEDERA MAINNET

The record exists.
It cannot be erased.

Signal Archive makes deleted public statements provable, timestamped, and independently verifiable on Hedera.

signalarchive.org

Capture truth before it disappears.

Open Track · Hedera Apex Hackathon 2026

Live mainnet: 4,093+ attestations on Hedera
Real deletion caught and preserved (@WhiteHouse)
5 Hedera standards (HCS, HIP-551, HCS-2, HCS-11)
AI-powered autonomous severity scoring
Publicly verifiable — no trust required

Public statements. Permanent record.
